All orders received subject to prior sale. We recommend that you order early to avoid disappointment in case we run out of a variety.

We add extras to each order, the amount and varieties vary with the size of the order. It will help us if you will suggest varieties you would like to try.

Cultural directions will be sent free with your order.

QUANTITY PRICES

We will sell 10 bulbs at 8 times the single price, 25 bulbs at 18 times the single price, and 100 bulbs at 64 times the single price. We will prepay all orders at quantity prices except on the 100 rate. The 100 rate is priced F.O.B. Madison, Ohio. On large lots of bulbs or bulblets will be pleased to quote prices on want lists. In most cases we have ample stocks of the common commercial varieties to quote on 1000 lots.

BULB SIZES

We offer bulbs in three sizes: Large size is from 1¼ inches in diameter, medium size from ¾ to 1¼" in diameter, small size ⅜ to ¾ inches in diameter. For top performance the large size bulb is best. Medium size bulbs will give good blooms, but will be smaller and bloom a little later in the season. Small size bulbs will generally bloom, but spikes will be noticeably smaller. They will make large bulbs for next year.

BULBLETS

Bulblets are hard shelled cormels which are found at base of bulb when dug. They are recommended to experienced growers who want to get an inexpensive start of a variety, often they are difficult to germinate so we do not guarantee them to grow. Packages of bulblets will run from 50 upward.

(No bulblet orders accepted after April 1st).

GUARANTEE

We make every effort to send out stock of the highest quality and true to name. If error should occur we will endeavor to make satisfactory adjustment. Under no circumstances will we be liable for more than purchase price or to replace the stock. As the planting and care of stock sold by us is beyond our control, we cannot be in any way responsible for the results after planting.

KEY TO DESCRIPTIONS

First is the name of the variety, then in parenthesis the size and color class figures (see Classification Key below).

Following this is the name of the originator and the year in which the variety was first available to American purchasers.

The figures in the last parenthesis denote the number of growing days required from planting to date of blooming for large bulbs.

Because of soil conditions, climate, etc., this will vary considerably. However, the blooming dates will give some idea of what to expect from a variety.

CLASSIFICATION KEY

The number after the name of the variety denotes the classification number as they are classified in our gladiolus shows at the present time. They are classified in five sizes as follows:

Miniature Glads	100—Florets under 2½"
Small Glads	200—2½" through 3¼"
Medium Glads	300—3¼" through 4⅜"
Large Glads	400—4½" through 5⅜"
Giant Glads	500—5½" or larger

For instance, Abigail is the first variety described, and whose number is 366. The 300 means it has a floret size from 3¼" through 4⅜" and the 66 designates it a lavender. Hence the numbers right after the name tell the story of the size and color of the individual floret as grown under field conditions from large bulbs.

Selecting Varieties

We believe each variety listed in our catalog is worthwhile and merits your consideration. You may or may not like a variety depending upon your personal tastes and the use you make of the flowers. Soil, climatic conditions, etc., will also cause varieties to vary in performance. This may make it necessary to try and discard varieties not suited to your conditions.

Cutflower growers selling blooms to florists need to grow a large proportion of whites and pinks. Lavender, yellow, and red are colors that follow in demand. The florists usually do not care for too many of the dark colors. If you are growing blooms for roadside stands or home decorations the darker colors such as blue and smokies sell well.

Price is not necessarily an indication of the merits of a variety. Newer kinds must be higher in price because of scarcity of stock. We do advise cutflower growers to get a start in some of the newer kinds such as Spotlight and Dieppe. While the price may be too high to make out on cutflowers in the first year or two, your original investment will pay handsome dividends by enabling you to work up a stock ahead of your competitor and will pay off in premium prices for blooms over a period of years.

We are listing some recommendations to help you:

New Introductions for 1949

From Perry-Lee Nursery:

BERNADETTE (500) Stinson '49 (early mid-season)

A beautifully ruffled white opening eight or nine 5½-inch florets of excellent substance on strong straight stem. An inconspicuous light purple line appears in the throat on the lip petals. Total of 18 to 20 buds on a 28-inch flowerhead. Excellent propagator. Best Seedling and Reserve Champion at 1946 P.Q. G.S. Show in Montreal. We feel sure you will like this one. Picture on front cover. Stock is scarce since it is being introduced a year ahead of time. Only a limited number of bulbs and bulblets are for sale this year. No bulblets sold separately.

\$5.00 any size bulb. Up to 5 bulblets at 75c each can be had with the purchase of each bulb. Unit price one bulb and 5 bulblets, \$8.00.

From Roger Arnett:

NANCY (450) Arnett '49 (88)

The light red with the outstanding Trial Garden Record—with the highest average score in the four NEGS Test Gardens in 1947. Floret size 4½-5 inches, total buds 19, open florets 7, buds in color 5, days to bloom 88, height in field 56 inches. Excellent attachment, shipping toughness, perfect opening to tip after cutting, always straight. Good propagator and healthy. Has won American Achievement Award, best seedling in four shows and Grand Champion bloom with but limited showing.

Nancy should prove to be one of the finest commercial reds.

ADORATION (466) Klein '48 (69)

An early pink orchid with a creamy throat. Somewhat like Rima in color. Grows 54 inches tall, opens 7-5 inch florets. Bulblets grow extremely well and make mostly large bulbs. The beautiful color, rapid propagation, and earliness make this a very worthwhile variety.

Gladiolus Seeds

We offer a new thrill to our customers — that of growing glads from seed. New varieties with the exception of sports are developed and selected from bulbs grown from seed. Each seed (even from the same pod) will be a different new glad with characteristics of its own. The percentage of good ones will be small, but you will find many you will enjoy growing and the chance always exists that you may be lucky enough to find something outstanding.

To grow seeds into bulbs plant them a little less than an inch deep in a well prepared seed bed. Keep them well watered and in partial shade. Most seeds will develop into large enough bulbs to bloom the next year with good culture. Then you can select the ones you want to save and increase your stock by growing the bulblets attached to the bulb.

All seed crosses offered here were made by Rev. William J. Single. We know he has done a careful conscientious job of hybridizing. The first variety listed is the seed parent, the second the pollen parent.

Please order these seeds in units of 5 by number. They are priced at 5c each. Please give us your second choice as we expect many crosses will sell out early.
